

Name: \_\_\_\_\_

# GCSE (1 – 9)

## Congruent Triangles

### Instructions

- Use **black** ink or ball-point pen.
- Answer all questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- Diagrams are **NOT** accurately drawn, unless otherwise indicated.
- You must **show all your working out.**

### Information

- The marks for each question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end

1  $ABCD$  is a parallelogram

Prove that triangle  $ABC$  is congruent to triangle  $BCD$ .

$AC = BD$  opposite sides of a parallelogram  
are equal

$AB = CD$  \_\_\_\_\_ " \_\_\_\_\_

$BC$  is common to both triangles

SSS

(Total for Question 1 is 3 marks)

2

 $ABCD$  is a parallelogram $E$  is the point where the diagonals  $AD$  and  $BC$  meet.Prove that triangle  $ACE$  is congruent to triangle  $BDE$ .

$AC = BD$  opposite sides of a parallelogram  
are equal

$\angle ACB = \angle CBD$  Alternate angles are equal

$\angle CAD = \angle ADB$  ————— " —————

ASA

(Total for Question 2 is 3 marks)

- 3 The diagram shows two triangles,  $ABD$  and  $BCD$ .

Prove that triangle  $ABD$  is congruent to triangle  $BCD$ .

$$\begin{aligned} \angle ADB &= 180 - 75 - 42 \\ &= 63^\circ \end{aligned}$$

Angles in a triangle  
add to  $180^\circ$

$BD$  is common to both triangles

$$\angle ABD = \angle BDC$$

$$\angle CBD = \angle ADB$$

ASA

(Total for Question 3 is 3 marks)

4

$A$  and  $C$  are points on a circle, centre  $O$ .  
 $AB$  and  $BC$  are tangents to the circle.

Prove that triangle  $ABO$  is congruent to triangle  $BCO$ .

$\angle OCB = \angle OAB = 90^\circ$       Tangent meets  
radius at  $90^\circ$

$OB$  is common to both triangles

$OA = OC$  both a radius

RHS

---

(Total for Question 4 is 4 marks)

5

 $ABC$  is a triangle.

$CDEF$  is a parallelogram such that:

$D$  is the midpoint of  $AC$

$E$  is the midpoint of  $AB$

$F$  is the midpoint of  $BC$

Prove that triangle  $ADE$  is congruent to triangle  $BEF$ .

$$AE = BE \quad E \text{ is the midpoint of } AB$$

$$\angle AED = \angle EBF \quad \text{corresponding angles are equal}$$

$$CF = DE \quad \text{opposite sides of a parallelogram are equal}$$

$$CF = BF \quad F \text{ is the midpoint of } BC$$

$$\therefore DE = BF$$

SAS

(Total for Question 5 is 4 marks)

6  $ABC$  is an equilateral triangle.

$D$  lies on  $BC$

$AD$  is perpendicular to  $BC$

Prove that angle  $CAD$  is equal to angle  $BAD$ .

$AB = AC$  lengths of equilateral triangle  
are equal

$AD$  is common to both triangles

Triangle  $ABD$  and triangle  $ACD$  are  
right angled (given)

Triangle  $ABD$  and  $ACD$  are congruent  $RHS$

$\therefore$  Angle  $CAD =$  Angle  $BAD$

---

(Total for Question 6 is 4 marks)

7  $ABCD$  is a quadrilateral

$$AB = AD$$

$$BC = CD$$

Prove that angle  $ABC$  is equal to angle  $ADC$ .

Triangle  $ABC$  and triangle  $ADC$  are congruent

$$AB = AD \quad \text{given}$$

$$BC = CD \quad \text{given}$$

$AC$  is common to both triangles

SSS

$$\therefore \text{Angle } ABC = \text{Angle } ADC$$

(Total for Question 7 is 4 marks)
