14. Omar used the following recipe to make a drink to sell at a school fete.

For each glass of drink:

- use the juice of 1 orange,
- use $\frac{1}{8}$ of the juice of 1 grapefruit,
- add enough lemonade to fill the glass to 300 ml.

He squeezed:

- 68 ml of juice from each orange,
- 232 ml of juice from each grapefruit.

Omar sold 72 glasses of his drink.

The bottles of lemonade Omar used each contained 2 litres.

$$2 \text{ l} = 2000 \text{ ml}$$

- (a) How many bottles of lemonade did Omar need to open?
You must show all your working.

[5]

Each 300ml glass drink

Orange $\rightarrow 68 \text{ ml}$

Grapefruit $\rightarrow \frac{1}{8} \times 232 = 29 \text{ ml}$

Lemonade $\rightarrow 300 - (68 + 29) = 203 \text{ ml}$

Sold 72 glasses $\rightarrow 203 \times 72 = 14616 \text{ ml}$
lemonade

$14616 \div 2000 = 7.308$ bottles

so he'll open 8 bottles

8 bottles

- (b) All the lemonade was donated, so cost Omar nothing.
He only paid for the fruit that he used.

The oranges cost £1.08 for a bag of 6.
The grapefruit cost 56p each.

Omar made 60% profit on each glass he sold.

What was the selling price of each glass of Omar's drink?

[4]

Costs / glass

Orange $\pounds 1.08 \div 6 = 18 \text{ p}$

Grapefruit $\frac{1}{8} \times 56 = 7 \text{ p}$

25 p

Profit $\frac{60}{100} \times 25 = 15 \text{ p / glass}$

Price
~~cost~~ per glass = $25 + 15 = 40 \text{ p}$

Selling price of each glass 40 p
