**Hypothesis** – A prediction for the outcome of an investigation.

| Census                                  | Sample                                   |
|---|--|
| getting information from all members of | collects information from part of the    |
| a population                            | population                               |
| quicker, easier and cheaper             | takes all views into account and is more |
|   | accurate                                 |

## Sampling Methods:

| Random     | All have equal chance of getting picked. Assign each a number and use a random number machine to pick the people within the sample.  |
|------------|--|
| Systematic | A regular pattern is used, for example every 50 <sup>th</sup> person. Randomly choose a starting point between 1 and 50. Then every 50 <sup>th</sup> person from there is selected. Easy to do but not good if there is a pattern in the data. |
| Cluster    | The population is divided into clusters. Some of the clusters are<br>chosen randomly and all members of them are used. Can be<br>quicker, cheaper and easier but the clusters need to representative<br>of the population.                     |
| Stratified | Sample is in proportion to a characteristic of the population. Then a random sample of each strata is taken.   |
| Quota      | The population is divided into groups and a quota from each group is decided.  |

**Control Group** – a group used to compare the results of study participants with **Pilot Study** – a pre study to check that the questions are understood and to see if any changes need to be made.

**Population** – everything or everyone being investigated.

**Primary Data** – data collected by the person doing the investigation **Secondary Data** – data collected for another purpose but used in the investigation

**Quantitative Data** – numerical data **Qualitative Data** – non numerical data

**Discrete** – can only take certain values (shoe size) **Continuous** – can take any value within a range (height)

| Questionnaire                             | Face to Face Interview                        |
|---|---|
| Anonymous may lead to more honest answers | Questions can be explained                    |
| Cheaper and quicker                       | Follow up questions could lead to more detail |
